85 year anniversary: October 5, 1930

October 5, 1930: Discovery of East Texas oilfield

The East Texas oilfield is **the largest and most prolific oil reservoir in the contiguous United States.**

Since its discovery on October 5, 1930, some 30,340 wells have been drilled within its 140,000 acres to yield nearly 5.2 billion barrels of oil from a stratigraphic trap in the Eagle Ford-Woodbine group of the Cretaceous

East Texas Oil Field

History of collaboration between Norway and US

US Oil Companies came to Norway to help us build competence and establish a Norwegian oil & gas industry

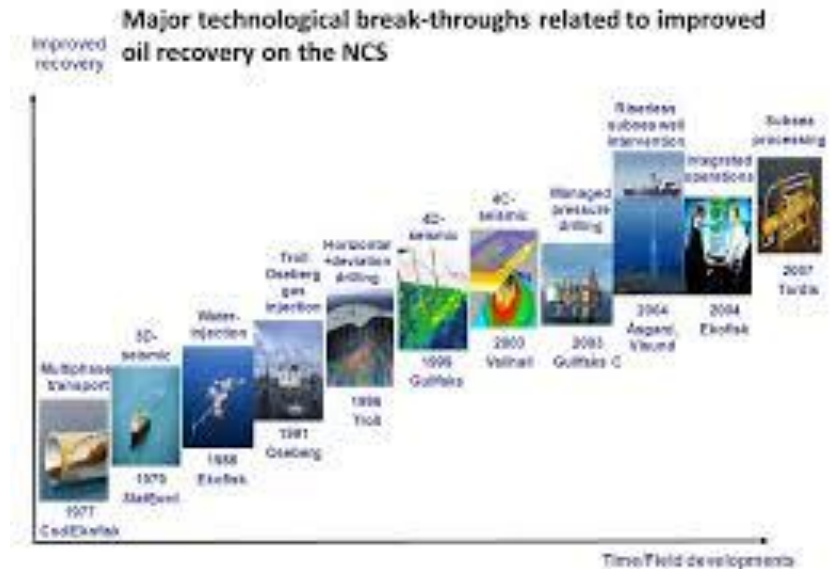

Ocean Viking: The discovery of Ekofisk in 1969

Top political Norwegian objectives

- Build domestic competence
- IOR and EOR

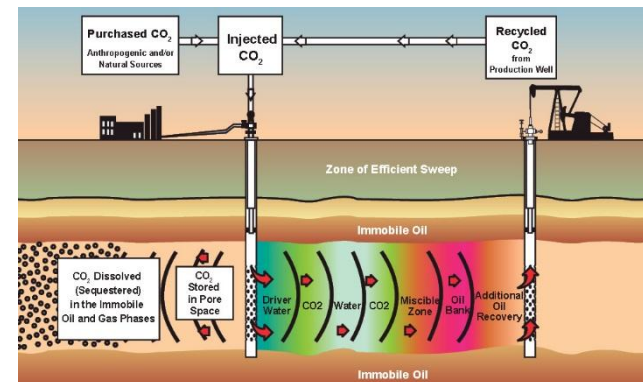

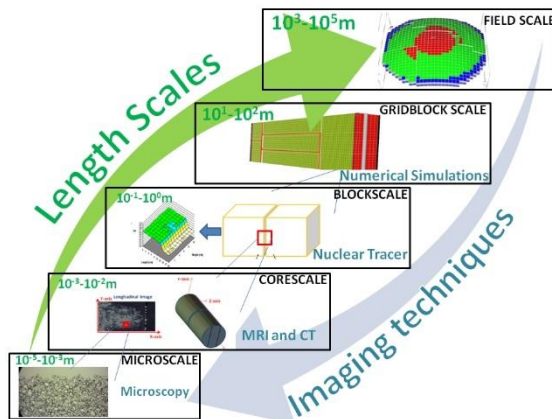

One answer: The establishment of Statoil in 1972

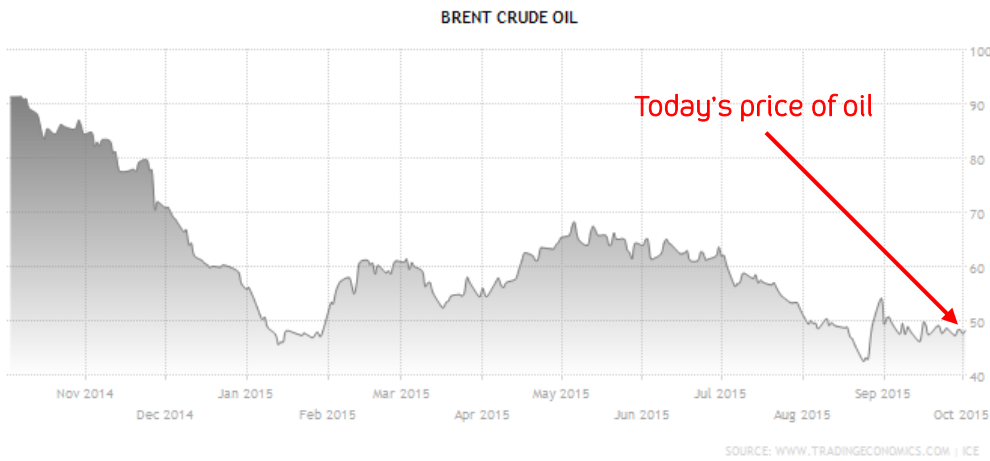

EOR: You are taking this even a step further

- EOR:
Getting oil and gas out that we thought would be left in the reservoir forever

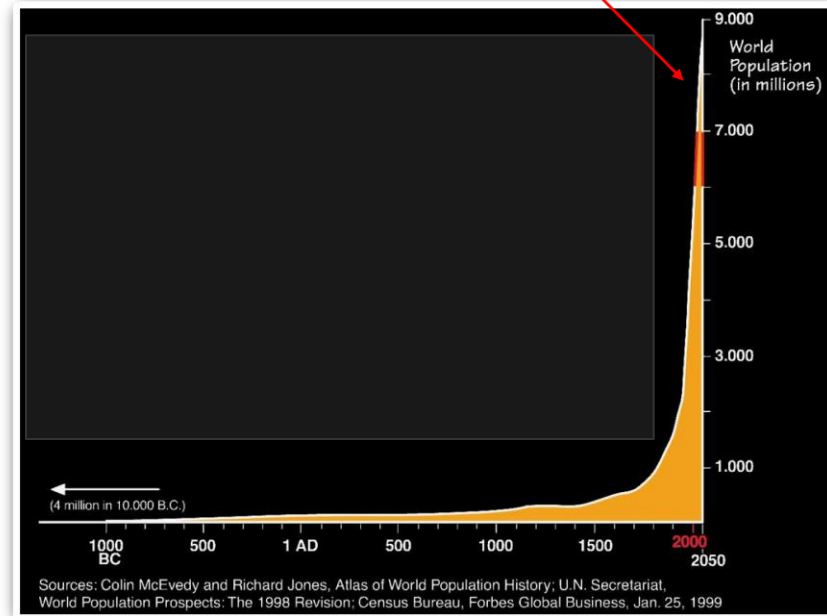

- ENVIRONMENT AND VALUECREATION
Making good use and putting value on CO₂

Your knowledge and efforts more needed than ever

9,000 million in 2050
in need of energy?

Collaborate and Improve
